

Whitepaper Sanki Vraja®

English v.0.1.0

Welcome to the Sanki Vraja® universe, a realm of innovation and imagination where blockchain technology and Romanian culture converge. Our project, a meme coin with personality, reveals a unique model of interaction between the token and the business aspect, offering a new perspective on how cryptocurrency can complement and support a concrete business model.

The Sanki Vraja project comprises two essential components: the token and the Sanki® brand.

The token is the economic force of the project, while the Sanki® and Sanki Vraja® brands represent its identity and culture, deeply rooted in the collective consciousness of Romanians. This synergy between economic and cultural aspects creates a unique ecosystem, connecting the digital world with the traditional one and providing the community with a unique, valuable, and diverse experience.

In Romanian, the name Sanki® evokes humor and irony and aligns perfectly with the essence of a “meme coin” type cryptocurrency. Sanki is often seen as the first Romanian meme coin, and we intend to maintain this distinction.

The expression "Sanki Vraja", already embedded in the collective consciousness of Romanians, holds inestimable intrinsic value as a natural and powerful cultural symbol. Through the Sanki Vraja brand, we not only capitalize on this pre-existing treasure but also amplify its essence, transforming it into a distinct and strong brand identity. With instant recognition and emotional connection, we are in a privileged position to build an unmatched brand not only in the hearts of Romanians but also in the international crypto sphere.

Furthermore, by combining the instant recognition strength of the "Sanki Vraja" expression with the dynamic character of a "meme coin" type cryptocurrency, we have synthesized an original economic model. This unique economic model not only incorporates traditional characteristics of digital economies but enriches them with layers of cultural and emotional interaction, having the potential to create added value.

Through Sanki Vraja, we explore new uses for blockchain technology and connect the digital world with the traditional one, demonstrating utility through an innovative discount system and thus creating an ecosystem that combines e-commerce, franchises, gaming, digital arts, and a metaverse full of opportunities.

Sanki and utility

The Sanki token, at the core of the Sanki Vraja project, is more than just a cryptocurrency. It embodies a blend of innovation, culture, and technology, serving as a fundamental pillar in the ecosystem. Its utility extends beyond typical financial transactions, encouraging complex and novel interactions within the community.

The token plays a pivotal role in connecting the digital economy with the real-world economy, not only facilitating access to a variety of services and activities in the digital space but also serving as a key instrument in real-world economic transactions.

Its uses include:

1. Discount System: The Sanki Vraja project's innovative discount system, based on burning Sanki tokens, exemplifies the integration of digital and traditional markets. This system provides users with substantial discounts on products and services, making the Sanki token a valuable tool for their economies and facilitating significant interactions in the economic sphere. Through this, the project effectively links the digital market with traditional commerce, offering tangible benefits in everyday activities.

2. Gaming Platform: In the gaming platform of the Sanki Vraja project, the Sanki token introduces a new dimension to the gaming experience. It allows users to participate in challenges and competitions, where they can win tokens based on their performance and strategy. This integration of the token into gaming heightens engagement and interest within the community, adding a competitive and rewarding aspect to the gaming experience.

3. Affiliate Programs, Merch-Art, and Bounty: The Sanki token is also utilized in affiliate programs, merch-art, and bounty rewards. In these initiatives, community members are encouraged to contribute to the development and promotion of the project.

4. Metaverse: In the Sanki Vraja project's Metaverse, the Sankiverse, the Sanki token expands its utility significantly. It transcends traditional digital boundaries to become the primary currency in the Metaverse. This pivotal role in the Sankiverse allows for a wide range of transactions, activities, and benefits.

5. NFT Marketplace: In the NFT Marketplace of the Sanki Vraja project, the Sanki token serves an essential role as the primary currency. This allows for the purchasing, trading, and renting of NFTs, highlighting its significance and utility in the realm of digital art and collectibles within the project's ecosystem.

The Sanki token's multidimensional approach makes it a versatile tool, fostering active community engagement and supporting the ongoing growth of the Sanki Vraja ecosystem. Its extensive use underlines the project's commitment to innovation, creativity, and providing added value for both users and investors.

A deflationary economy based on a cryptographic token

In essence, a deflationary economy refers to an economic strategy where the total quantity of currency available in the market is progressively reduced over time. This contrasts with inflation, where the amount of money in circulation constantly increases, potentially leading to a decrease in the currency's value. In a deflationary economy, the key principle is the reduction of supply, which can lead to an increase in the currency's value over time.

The Sanki Vraja project employs an original deflationary economy, which involves the periodic burning of Sanki coins in exchange for immediate valuable benefits. This strategy aims to decrease the total number of coins in circulation, contributing to the long-term increase in the coin's value. By encouraging coin burning, the project creates a balance between supply and demand, strengthening community trust and establishing a sustainable economy for the long term.

The Sanki Vraja project integrates diverse burning incentives, including through NFTs and online gaming, that interact with the real-world economy, particularly with online businesses under the Sanki brand. In the future, the e-commerce platform will allow external businesses to join the discount system, contributing to the appreciation of the Sanki token. Businesses will be motivated to join this initiative and offer discounts through Sanki burning due to the robust e-commerce platform, well-established affiliate system, other promotional mechanisms, and an enthusiastic community eager to embrace businesses contributing to the Sanki burning.

Blockchain technology to create a cryptographic token in a finite quantity.

The Sanki Vraja® platform is based on a cryptographic token called Sanki, issued on the Binance Smart Chain (BSC) blockchain network. At the project's launch, a fixed cap of 888,000,000 Sanki tokens was established, each with 18 decimal places.

The contract address for the Sanki token is

0x4A3dDbaf5Ef5B75991585797c8e0f3681d41D438

The presale event occurred on May 28, 2023, on [pinksale.com](https://www.pinksale.com), successfully raising 600 BNB in just 5 hours.

<https://www.pinksale.finance/launchpad/0x4242C2cC9de82f7cB20168B2F70cdeA6c4BF3071?chain=BSC>

The initial distribution of the Sanki token is strategically structured to support the development and expansion of the project:

- 44% allocated for presale, ensuring a strong start;
- 22% dedicated to the liquidity pool, maintaining market stability and liquidity;
- 15% reserved for marketing, crucial for promoting and increasing project visibility;
- 10% held for founders, with a gradual release over 72 months, demonstrating long-term commitment;
- 9% aimed for future listings on Centralized Exchanges (CEX), thereby expanding the token's accessibility.

Transparency and security through blockchain technology

Blockchain technology, fundamental to the Sanki Vraja® platform, employs a distributed ledger to record each token transaction in a transparent and immutable way. This technology offers users and investors of the Sanki token various benefits and guarantees, enhancing the platform's reliability and security. The blockchain's transparency and immutability are crucial in ensuring a secure and trustworthy environment for all platform participants.

The blockchain technology used in the Sanki Vraja® platform ensures several key aspects:

1. Guarantees that no new tokens can be introduced into circulation beyond the existing supply.
2. Enables tracking of all ecosystem transactions involving the Sanki token.
3. Allows easy and real-time verification of the circulating token quantity following the burning process.
4. Enables estimation of the token's value based on the circulating supply.

The formula for capitalization is:

Total Market Capitalization Value

Circulating Supply

5. ensures the irreversibility of the token burning process.
6. trust that the reward and loyalty process is fair and equitable for all participants.

Definition of "burn token"

The process of token burning on a blockchain refers to the permanent and irreversible elimination of a specific number of tokens from the total supply. This process involves sending or transferring the tokens to a special address, often called

a "burn address" or "dead-end address," from which they can no longer be withdrawn or used.

Token burning in cryptocurrency projects serves various purposes as part of monetary policy or economic mechanisms:

1. Supply Reduction: Reducing the supply of tokens through burning can potentially increase the value of the remaining tokens. This happens if the relative demand for the tokens increases against a reduced supply, following basic economic principles of supply and demand.

2. Inflation Control: Some cryptocurrencies implement token burning, which helps maintain the value of the currency over time. By reducing the supply of tokens in circulation, this strategy can counteract the devaluation that typically accompanies increased money supply, thereby stabilizing the token's value.

3. Economic Incentives: Some cryptocurrency projects use token burning as an economic incentive. This approach can be part of a reward system for users or create additional motivation for holding and using the token. By implementing token burning in this way, projects can stimulate user engagement and investment in the token, potentially enhancing its value and utility within the ecosystem.

Token burning is an irreversible process and cannot be undone once executed. Therefore, crypto projects that decide to employ token burning must carefully plan their strategy, taking into account their specific objectives and the desired effects on the cryptocurrency's economy. This careful planning is crucial to ensure the intended impact of the token burning aligns with the project's overall goals.

Withdrawing tokens from circulation through the burning process, in itself, does not guarantee a favorable impact on the price in the absence of constant demand. However, burning ensures that the eliminated tokens will not exert downward pressure on the value.

The innovative architecture of the Sanki Vraja ecosystem: key elements and interconnectivity

In the vibrant heart of the Sanki Vraja universe, we discover essential elements that make up a unique and innovative ecosystem:

1. sankivraja.com: The central portal where all component systems, such as the bounty program and leaderboard, unify, and the primary source of official information;
2. Mobile app enabling access to ecosystem functionalities;
3. Leaderboard, an original ranking system based on Sanki burning;
4. Integration of the Sanki token for transactions and obtaining discounts; Expansion of the e-commerce platform both online and offline;
5. Affiliate and merch-art programs;
6. Gaming Platform: Utilizing the Sanki token for access and rewards in games; Flagship Sanki game.
7. NFTs: Their role in adding value and uniqueness to the ecosystem; Details about each type of NFT; NFT marketplace.
8. Community: Active involvement through bounty programs, affiliations, and merch-art, encouraging contributions and rewarding promotion;
9. Metaverse: An extended virtual world with enriched interactions, introducing new concepts - sub-universes with virtually unlimited virtual spaces, meta-objects. This will be a visual representation of the entire Sanki ecosystem using WebGPU technology.
10. The Sanki® & Sanki Vraja® Brand
11. The Sanki Foundation is actively involved in the fight against school dropout and is developing dedicated programs that promote access to education and provide support to students in need. This initiative reflects the commitment of the Sanki Foundation to ensure that every student has the chance to continue their studies and build a brighter future (details coming soon).

1. sankivraja.com: The Central Hub Where All Systems Unify

sankivraja.com functions as the central hub of the Sanki Vraja ecosystem, integrating and centralizing all essential components of the project. This portal serves as the meeting point for bounty programs and leaderboards, providing a unified environment for user interaction. Furthermore, the website acts as the primary and official source of information, ensuring access to the latest news, updates, and project details, playing a crucial role in maintaining transparency and community cohesion within Sanki Vraja.

As the central portal of the Sanki Vraja ecosystem, sankivraja.com will implement a sophisticated Web 3.0 authentication solution. This will allow users to access their Sanki account using a Metamask wallet, granting them access to detailed statistics of the bounty program, their position on the leaderboard, and a comprehensive overview of assets associated with the Sanki Vraja ecosystem. This advanced functionality underscores Sanki Vraja's commitment to security, transparency, and a seamless and integrated user experience.

2. Sanki Vraja Mobile App

The Sanki Vraja mobile app will be built on the already solid infrastructure of the sankivraja.com website. It will provide a seamless and integrated experience, allowing users to access the functionalities of the Sanki ecosystem, including Sanki token transactions, tracking progress in bounty programs and leaderboards, and managing digital assets within the ecosystem. The app will be an essential tool in the expansion and consolidation strategy of the Sanki Vraja ecosystem, adding mobility and accessibility for the community.

Both the sankivraja.com website and the Sanki Vraja mobile app, in the future, will function as essential gateways to the gaming platform, metaverse, and eCommerce, facilitating access to a wide range of functionalities. This integration ensures coherence and synergy between the different components of the ecosystem, providing users with a complete and immersive experience in the Sanki Vraja universe.

The mobile app will implement an internal text messaging system, where the community can engage in real-time discussions. What is called a "like button" on other social networks will be referred to as a "sanki button" in our app. It will be available in multiple ways represented by different colors: blue, yellow, red.

- No tokens will be burned, but it signifies a simple interaction.
- 1 Sanki is burned for the user who pressed it.
- 1 Sanki is burned for the recipient as a sign of appreciation.

3. Leaderboard

The Sanki Leaderboard, a central element of the Sanki Vraja ecosystem, is an innovative ranking system that displays and promotes real-time Sanki burns. It fosters competitiveness and active participation among community members.

The Leaderboard puts our valuable members who significantly contribute to the appreciation of the Sanki token through its burning in the spotlight. Through this system, we consistently acknowledge the essential contribution of these members to the success and stability of the project. They represent the foundational pillars of our community and deserve full appreciation for their dedication in strengthening the value of the Sanki token and the entire ecosystem.

The Leaderboard integrates all components of the platform that contribute to Sanki burning, ensuring transparency and cohesion throughout the process. Through it, every token burn becomes visible in real-time, emphasizing the importance of each individual action and reinforcing each participant's commitment to the Sanki Vraja project.

This system will play a crucial role in the distribution of NFTs from the collection of 8880+8 NFTs, providing a transparent view of token burns. Furthermore, it will stimulate healthy competition for obtaining these valuable NFTs, thereby integrating the Leaderboard more deeply into the ecosystem's reward and engagement mechanics.

Activity on the Sanki Leaderboard, correlated with participation in the bounty program, will contribute to the creation of an objective ranking of the most valuable community members. This ranking reflects their significant contribution to the growth of the Sanki token's value and solidifies their position as pillars of our community.

4. E-commerce: Integrating the Sanki token for transactions and discounts

The development plan for the Sanki Vraja e-commerce platform is structured into two phases. The initial phase begins with Sanki.ro, where customers experience price reductions by burning Sanki tokens. The next stage includes expansion into the offline realm at the Sanki restaurant, with support from the mobile app. These initiatives will pave the way for the second phase, the launch of a "ready-to-use" e-commerce platform that will provide comprehensive solutions for online stores and seek partnerships in offline sectors, thus consolidating the Sanki ecosystem in an integrated and dynamic manner.

The "SankiMag" e-commerce platform encourages the Sanki Vraja community to play an active role in promoting merchants' products. This dynamic creates a virtuous cycle: community members are motivated to support merchants because they contribute to the ongoing burning of Sanki tokens. Thus, they not only benefit from discounts but also support an ecosystem that encourages the use and circulation of the Sanki token. This constitutes an innovative community engagement strategy, enhancing the value and sustainability of the entire project.

Obtaining Discounts by Burning Sanki Tokens

Example - Basic Idea

For a shopping cart worth 100 EUR, you can get a discount of 10 EUR by burning tokens worth 1 EUR at the current rate.

In the case of sanki.ro, the discounts will be 10% of the shopping cart's value. To obtain these discounts, the customer must burn tokens worth 10% of the discount value.

Burning the Sanki tokens is done at the shopping cart level. Before finalizing the order, customers have the option to burn Sanki tokens in exchange for a discount that is 10 times the value of the burned Sanki tokens.

This innovative mechanism not only encourages the active use of Sanki tokens but also provides added value to customers, combining financial benefits with participation in the Sanki Vraja economy.

5. Affiliate Programs and Merch-Art

The Sanki Vraja affiliate program offers progressive growth and rewards opportunities, encouraging community members to actively participate in the project's success. It has a multi-level structure where affiliates advance and receive higher commissions as they reach sales thresholds. A unique aspect is the way commissions are distributed, as they are automatically converted into Sanki tokens directly from the DEX, thus positively contributing to its value.

The Merch-Art program offers digital artists the chance to personalize products in the merchandising store, creating a constructive interdependence between art and the brand. Artists are rewarded based on sales, and the program includes works with unlimited, limited, and unique editions, each with different value levels. Similar to the affiliate program, artists receive commissions in Sanki, adding value to the ecosystem and stimulating token price growth.

6. Sanki Vraja Gaming Platform

The development of the "fun2burn" protocol represents an innovative approach to gaming. It stipulates that the losing player must burn Sanki tokens equivalent to the amount wagered in the game, in favor of the winner. This method avoids legal implications related to turning the platform into a gambling source because it does not transfer the lost tokens to the winner. Instead, the winner recovers their wagered amount, and their success is reflected in the leaderboard through the tokens burned by the loser, bringing them additional benefits within the ecosystem. This stimulates competitiveness and active participation while maintaining the integrity and fairness of the game.

The implementation of the "fun2burn" protocol will be universal within the Sanki Vraja gaming platform, applying to both the Sanki proprietary game and third-party created games. By integrating this protocol into all games, consistency and uniformity in the user experience are ensured, promoting a fair and interactive gaming environment regardless of the chosen game. This strategy reinforces the fundamental principles of the ecosystem and encourages broad and diverse participation within the gaming community.

Sanki The Game

Our gaming platform will kick off with the game "Sanki" - an engaging and interactive P2P board game. Taking inspiration from the main character, Sanki Vraja, we will create a comic-style universe similar to those of Marvel. Alongside a team of

professional copywriters and art designers, we will develop an original story in a unique context, featuring characters from different worlds and times. Each character has their own journey through universal portals and unique abilities.

Our art designers will create 88 game cards, representing these independent characters. On the game board, these characters meet in duels for resources or strategic positions, thereby forming temporary alliances.

The game mechanics will be dynamic, with various interactions between characters and upgrade possibilities. Holders of Sanki Vraja NFTs will enjoy specific advantages, depending on the game cards and NFT characteristics. The game can be played for free, or players can wager Sanki tokens, with the winner receiving Sanki tokens back while the loser's tokens are burned in the winner's account. Success in the game will be rewarded with unique NFTs, limited to 8880 available copies.

Later, the online Sanki Vraja game will be transformed into a physical game that will be sold on our platform. Character upgrades will be done through augmented reality and will take into account the abilities already acquired in the online game.

7: NFT Technology in the Sanki Vraja ecosystem

Chapter 6 of the Sanki Vraja whitepaper explores the role and diversity of NFT technology within the ecosystem. Key elements include:

7.1 Sanki Vraja Collection of 8880+8 NFTs: A series of unique digital artworks, each with its own story and value within the ecosystem.

7.2 Anniversary Coins: The unique combination of NFTs and physical metal objects, marking significant moments.

7.3 Sanki Vraja Affiliate Program: NFTs Representing Affiliate Levels

7.4 Merch-Art Program: NFTs reflecting artistic level and value, linked to the artist's initial address.

7.5 NFTs created by artists in the Merch-Art program.

7.6 Game Assets: Digital assets for games.

7.7 SvD (Sankiverse Domains): Virtual properties in the metaverse, represented as NFTs.

7.8 Metaobjects: Innovative concept to add depth and interactivity.

7.9 NFT Marketplace: A meeting place for trading and exploring NFTs within the ecosystem.

This chapter highlights the innovation and creativity in the Sanki Vraja ecosystem through the diversified use of NFT technology.

7.1 Sanki Vraja Collection of 8880+8 NFTs - The Cosmic Odyssey of Sanki Vraja

Discover Sanki Vraja, a cosmic explorer in a universe where life has been nearly wiped out. A cosmic catastrophe, accidentally triggered by an incredibly technologically advanced civilization during a quantum entanglement-multidimensional experiment, disrupted the fundamental universal constants, rendering life impossible. Sanki Vraja, one of the few survivors, travels through universal portals, exploring desolate worlds, collecting technologies, artifacts, and resources from long-lost advanced civilizations. At times, he encounters small groups of survivors from that world, sometimes hostile, sometimes with problems they beg him to solve.

7.1.1 The "Main" Collection of 8880 Sanki Vraja NFTs

This unique collection of 8880 NFTs showcases various incarnations of Sanki Vraja, each capturing a part of his captivating story. Each NFT is a window into this universe, offering holders not only a work of art but also a glimpse into a cosmic odyssey filled with mystery.

7.1.2 Obtaining NFTs

NFTs are acquired through the burning of Sanki tokens, a process that progressively increases in cost, highlighting the rarity and value of the NFTs. This method of acquisition not only contributes to the dynamics of the ecosystem but also actively involves the community in the project's evolution.

7.1.3 NFT Minting Costs

For every 88 minted NFTs, the number of burnt Sanki tokens required to obtain an NFT will increase by approximately 444 Sanki tokens, so the last minted NFTs will be worth 88,800 Sanki tokens.

When all 8,880 NFTs in the collection have been minted, they will be burnt, on average, for 66,600 Sanki tokens each, totaling 591,408,000 Sanki tokens (66.44% of the total supply).

7.1.4 Minting Costs for 8 Ultra-Special or Ultra-Rare NFTs

To obtain an ultra-rare NFT from the series of 8, it is required that an address has minted 88 NFTs from the Sanki Vraja series. These ultra-rare NFTs cannot be obtained by accumulating 88 minted NFTs in different addresses. This exceptionally rare distinction is exclusively offered to those who have made a profound and significant contribution to our ecosystem, contributing to the creation of a valuable and unique collection in Sankiverse.

Obtaining an ultra-rare NFT from the series of 8 represents the highest achievement in the Sankiverse, symbolizing the ultimate recognition for exceptional contributions to the Sanki Vraja ecosystem. This distinction is accessible only to those who have burned a significant amount of Sanki, thereby contributing to the appreciation of the token, and who have been pillars in creating a valuable and unique collection in

Sankiverse. It is a privilege extended to those who have demonstrated deep commitment and made significant contributions to the success of our community.

In addition to receiving the SANKI ultra-rare NFTs for collecting 88 NFTs, recipients will also be awarded 1/8 custom-made ultra-limited edition metaobject. This exclusive item, made from expensive and rare materials, symbolizes the exceptional value we attribute to our most dedicated community members. Together with the SvD it will be placed on, they will create a subuniverse distinct from the others.

7.1.5 Utility of Sanki Vraja NFTs in the Ecosystem

The Sanki Vraja NFT collection is not just a set of impressive digital artworks but also a series of powerful tools within the Sanki Vraja ecosystem. The utility of these NFTs extends across several components of the ecosystem, providing tangible benefits to their holders:

Bonuses in the Bounty Program: Owning a Sanki Vraja NFT provides a +5% bonus to rewards in the bounty program. These bonuses are cumulative, meaning that the more NFTs you hold, the higher your rewards will be. This encourages active participation in the ecosystem and offers significant added value to NFT holders.

Additional Shopping Discounts: Sanki Vraja NFT holders enjoy an additional 4% discount on purchases made through our platform. This discount is applicable individually and is not cumulative, ensuring that each NFT provides a unique advantage within the shopping experience.

Gaming Benefits: NFTs will provide additional advantages in the Sanki game. These benefits may include access to special features, upgrades, and other elements that enrich the gaming experience. Owning an NFT can positively influence game outcomes, offering players a strategic advantage.

Sanki Vraja NFTs as a Source of Passive Income: In the Merch-Art program, Sanki Vraja NFT holders will be able to allow their NFT to be printed on original Sanki® products. These will be premium products that will benefit from premium packaging and special attention from us. They will be somewhat more expensive than the "normal" ones that do not have printed NFTs. A portion of the sale value will go to the DEX and automatically buy \$Sanki, which will be transferred to the wallet of the NFT holder.

Ultra-rare NFTs from the collection will offer at least the same benefits and utility as the 8880 NFTs in the main collection.

The utility of Sanki Vraja NFTs enhances the value and engagement within the ecosystem, transforming each NFT not only into a piece of art but also into a tool for interaction and individual advantage growth. Through these multiple functionalities,

NFTs become central elements in the Sanki Vraja community's activities, encouraging active participation and providing concrete rewards for involvement in various aspects of the project.

7.2 Anniversary Coins

Sanki Vraja Anniversary Coins represent an elegant fusion of digital art and the physical world, marking significant moments in the project's history. When combined, NFTs and collectible metal objects bring a new dimension of value and sentimentality to the community. For the first anniversary series, an extremely limited edition of 111 pieces will be launched, each individually numbered from 1 to 111. This exclusive collection, offered at a price of \$111 per pair, includes a unique NFT and a corresponding physical coin, emphasizing the rarity, value, and prestige for Sanki Vraja collectors. Purchasing items from this collection will offer a 33% discount through Sanki burning.

Each year, the Sanki team will honor the remarkable contributions of community members by awarding 11 exclusive anniversary coins. This initiative rewards community members who have had a significant impact on the consolidation and development of the Sanki Vraja project. This recognition underscores the importance of active participation in the community and encourages ongoing involvement by its members.

Sanki Vraja Anniversary Coins will be available annually in an extremely limited quantity and through the pseudo-staking method to encourage long-term commitment and enhance the value of the Sanki token. These special coins can be reserved in advance by locking a quantity of Sanki, following the "first come, first served" principle, giving the community the opportunity to become more actively involved in the ecosystem. The required amount of locked Sanki will be equivalent to three times the price of an anniversary coin at that time.

7.2.1 Utility of Anniversary Coins in the Ecosystem

Sanki Vraja Anniversary Coins are not just art and collectible objects but also significant elements within the Sanki Vraja ecosystem. Holders of these coins enjoy specific advantages within the ecosystem:

1. Access to exclusive events or promotions.
2. Owning a coin brings a +3% bonus in the bounty program.
3. Benefits in the Sanki game; these benefits can be temporarily transferred through a "rent-a-coin" program that will directly benefit the rightful owner. This option will be implemented at the marketplace level.
4. Coins can be used to highlight the status and commitment of holders in the community directly on the leaderboard, emphasizing their membership in an exclusive and dedicated group of Sanki Vraja project supporters.

The Sanki Vraja team is exploring innovative features for anniversary coins, such as creating a "virtual timeline." This would allow holders to unlock interactive chapters about the project's history, providing exclusive access to multimedia content and games inspired by key events. Thus, anniversary coins become not only collectible items but also keys to an immersive and educational experience in Sanki Vraja culture. They will be closely tied to the Sanki game and the animated series on video-sharing platforms.

7.3 Sanki Vraja Affiliate Program: NFTs Representing Affiliate Levels

The Sanki Vraja Affiliate Program introduces a remarkable innovation by using NFTs to represent its members' affiliate levels. Each NFT symbolizes a different level within the program, offering specific benefits and rewards to the affiliate. These NFTs are not just symbols of achievement but are also transferable between users, providing flexibility and new opportunities in the community's dynamics. Transferring an affiliate NFT allows the new owner to immediately benefit from the advantages of that level, while the seller reverts to the base level. This system adds a dimension of fluidity and mobility to the affiliate program, encouraging members to engage in various initiatives within the Sanki Vraja ecosystem.

7.4 Merch-Art Program: NFTs Reflecting Artistic Level and Value

The Merch-Art Program in the Sanki Vraja ecosystem introduces a unique approach to using NFTs to reflect the level and artistic value of its creators. Each NFT in this program is unique and represents not only the artist's achievements but also their creative identity. While NFTs can be transferred between users, they permanently retain a connection to the original artist, ensuring ongoing recognition of their contributions. This feature transforms NFTs into a kind of digital autograph, enriched with specific benefits within the Sanki Vraja ecosystem. Transferring such an NFT allows the new owner to access certain benefits but not the artistic merits of the original creator. This system underscores the importance and individual prestige of each artist in the ecosystem while also offering valuable opportunities for growth and exposure within the community.

7.5 NFTs Created by Artists in the Merch-Art Program

Within the Merch-Art program, we collaborate with NFT digital artists to create collections of NFTs. These collections serve a dual purpose: on one hand, they can be purchased by NFT collectors who have the option to hold and trade them; on the other hand, owners of NFTs from these collections have the exclusive right to customize and sell original Sanki® products using these NFTs through our platform. This innovative approach not only adds value and diversity to the Sanki Vraja® ecosystem but also provides an opportunity for NFT owners to generate passive income through personalized products and their sale on our platform. It is a unique and challenging way to combine creativity with the commercial aspect, opening new perspectives for our community.

Payments to artists will be made exclusively in Sanki. These fees will be converted from RON to Sanki directly on the DEX, thus exerting pressure on the token's price.

To ensure the protection and authenticity of the artworks created within the merch-art program, registered artists must complete a specific Sanki Know Your Customer (KYC) process. This verification process clearly identifies the artists joining our program, providing confidence to collectors and end-users regarding the origin and quality of digital artworks.

7.6 Game Assets:

....

7.7 SvDs: Virtual Properties in the Metaverse, represented as NFTs

SvDs (Sankiverse Domains) represent more than just virtual properties in the Sanki Vraja metaverse; they are symbols of prestige and belonging. Owning an SvD (Sankiverse Domain) in the Sanki Vraja metaverse signifies not only active involvement in the ecosystem but also an indicator of pioneering status or "Original Gangster" (OG) in the community. This underscores the commitment and deep understanding of the project's vision by the holders, marking them as among the first to support and trust in the Sanki Vraja vision. Thus, owning an SvD is not just an investment in a virtual property but also an emblem of belonging to an exclusive and visionary group.

The launch of the 21,000 Sankiverse Domains (SvDs) in May 2024 represents a significant moment in the development of the Sanki platform, marking the transition to the project's second phase. These virtual domains, available in the form of NFTs, have a starting price of \$333, progressively increasing to \$888 for the last units. This pricing structure reflects the exclusivity and increased value of the domains in the Sanki metaverse, attracting interest and investments in this expanding virtual universe.

In accordance with the project's initial commitment, all addresses that participated in the pre-sale with a contribution of 3 BNB and did not sell their tokens will receive an airdrop as a form of recognition and appreciation. This airdrop is a gesture of gratitude for the early and continuous support of the project, reflecting the commitment of the Sanki Vraja team to its dedicated members.

Holders of over 30 NFTs from the Sanki Vraja collection will benefit from an automatic airdrop, through which they will be allocated an SvD (Sankiverse Domain). This gesture recognizes their commitment to the project and their active contribution to the ecosystem, rewarding them with a virtual property in the metaverse. This airdrop reflects appreciation for community members who have invested significantly in the NFT collection and support the project's growth.

After the initial launch of SvDs, Sankiverse Domains will offer the opportunity to obtain a limited number of 33 SvDs per year. This opportunity will be accessible by locking a significant amount of Sanki tokens through the pseudo-staking mechanism for a period of 12 months. The required amount of locked Sanki will be equivalent to three times the price of an SvD at that time. This method aims to stimulate long-term commitment and strengthen the value of the Sanki token in the ecosystem. The availability of SvDs through pseudo-staking will be announced in advance, and reservations will be made on a "first come, first served" basis.

7.8 Metaobjects represent a groundbreaking concept that brings together the digital and physical realms in a remarkable way. This revolutionary idea was born from a bold vision and a deep commitment to innovation, creativity, and authenticity.

Essentially, metaobjects are pairs of objects, one physical and one virtual, that share not only a mathematical model but also unique functionality in both worlds. The physical object is a mechanical jewel, a small work of art composed of a multitude of pieces, each crafted with the highest precision on exceptional CNC machines, similar to those used in the manufacturing of luxury wristwatches. Each metaobject is a mechanical jewel, composed of parts that can be disassembled and reassembled at any time, inviting you to explore and understand every aspect of it in-depth.

These objects will be made using exotic materials such as titanium, tungsten carbide, zirconium, platinum, gold, silver, or tritium.

The virtual NFT counterpart opens a gateway to a sub-universe in the metaverse, where you have the freedom to create and exhibit your NFT gallery in an unlimited space, conduct on-chain business, organize online events, meet friends, or present projects. Augmented reality on your smartphone allows you to bring the physical object to life in the real world, giving you the opportunity to share with others the fascinating experience of the metaverse right from your palm.

To own the physical part of a metaobject, you must possess the corresponding NFT pair, making these objects true timeless works of art and collectibles. Each series is produced in Switzerland with the same meticulous attention to detail and proudly labeled "Swiss Made" in very limited editions of up to 210 pieces, ensuring exclusivity and authenticity. With each new series, we bring a different design, always maintaining the freshness of the concept.

Metaobjects represent not only a fascinating synthesis of the virtual and physical realities but also a bridge between innovation and art, technology, and a passion for beauty. This remarkable connection between the two worlds opens new horizons for creativity and expression, offering a unique experience in the evolution of valuable objects.

7.9 NFT Marketplace: A meeting place for trading and exploring NFTs in the ecosystem.

The dedicated NFT marketplace for the Sanki Vraja project is designed as a comprehensive and secure ecosystem with the aim of not only facilitating NFT transactions but also providing a safe and efficient environment for interacting with NFTs within the project. This digital space will offer users the ability to conduct transactions, rentals, and access various NFT-related services, with a strong focus on transaction security and protection. It will also provide a user-friendly interface for both desktop and mobile applications.

On the NFT marketplace of the Sanki Vraja project, users will have the opportunity to explore and utilize a wide range of NFTs, including those from the Sanki Vraja collection, anniversary coins, SvDs, metaobjects, NFTs from affiliate programs and merch-art, and gaming assets. This platform is designed to support the digital economy of the project and provide access to a variety of options in a secure and transparent environment.

A notable aspect is that transaction fees on the NFT marketplace of the Sanki Vraja project will be paid in Sanki tokens. This approach not only facilitates transactions within the ecosystem but also contributes to the deflationary mechanism of the Sanki token. Some of these fees will be burned, thereby reducing the supply of Sanki tokens in the market and supporting the appreciation and stability of the currency. Through this method, the marketplace becomes an active tool in the economic dynamics of the project, encouraging token usage and contributing to the consolidation of the digital economy of Sanki Vraja.

8. The Sanki community

The community gathered around the crypto aspect of the Sanki Vraja project plays a crucial role in its success and development. This community brings enthusiasm, support, and a sense of belonging to a common vision. Through active community involvement, the project gains traction, valuable feedback, and a solid base of ambassadors and loyal users.

In addition to this, the crypto community can bring significant benefits to the business side of the project. The community's contribution to burning Sanki tokens helps maintain economic stability and increase the token's value. Furthermore, the feedback and suggestions from community members can continually improve the products and services offered, leading to innovation and customer satisfaction.

The community also serves as a powerful channel for promotion and distribution of business initiatives. By actively engaging in the project, community members become natural brand ambassadors and enthusiastically share information about it on their social networks and circles of influence. This can lead to organic growth in

the audience and customer base for the project's business-related products and services.

In summary, the crypto community gathered around the Sanki Vraja project is a vital force contributing to its growth, development, and success. It is the heart of a complex and unconventional marketing engine. Active community involvement brings significant benefits to the business side, from increasing the token's value and economic stability to promotion, distribution, and innovation.

9. The Sankiverse

Sankiverse is truly unique in the world of metaverses. It is not designed as a game but as a visual and virtual representation of the entire Sanki Vraja ecosystem. It will be accessible directly in a web browser using WebGL and WebGPU technologies.

Sankiverse is composed of 21,000 hexagons arranged concentrically, forming a circular map called SvD (Sankiverse Domains). Each SvD represents properties in the virtual digital space. SvDs are not just simple virtual lands; they have multiple functionalities and are essential for the Sankiverse experience. When combined with the concept of "metaobjects," SvDs create sub-universes with virtually infinite virtual space for their owners. This virtual extension of the user's Sanki account can be customized in various ways, including NFT galleries, virtual meeting spaces, event venues, virtual stores, product presentation spaces, the potential for hosting games, abstract representations of on-chain data, and much more. Only imagination will limit the possibilities for using SvDs.

Metaobject owners will have the opportunity to work closely with 3D artists to customize their private space within their sub-universe. This customization process allows them to create a unique virtual environment tailored to their needs and preferences, offering a truly individualized experience within Sankiverse.

Unlike the classic metaverse, where space is limited to a fixed number of square meters, in Sankiverse, they have redefined space mechanics. Each SvD, along with a metaobject, will contain a virtual space with infinite expansion capacity, offering unlimited creative and customization possibilities. Expanding the space and its functionalities will be done simply by holding more currency in your wallet; the more currency you have, the more space you have for activities.

Regarding gaming, in the case of the Sanki game, SvDs represent virtual game boards that add an engaging and complex dimension to the gaming experience. These game boards can drop randomly or based on player preferences, depending on available resources or the strategic advantages each SvD offers. This aspect adds an interesting interaction in the game, as players must make strategic decisions regarding the use of SvDs in the game.

When a player suffers a loss in the game, a small portion of their penalty will be directed to the SvD parcel owner, thus turning the SvD into a source of passive income. SvD owners have the opportunity to promote their game boards based on the resources they hold. The more valuable assets an SvD owner has in their wallet within the Sanki ecosystem, such as Sanki coins, anniversary coins, metaobjects, or various types of utility NFTs, the richer and more attractive their game board becomes to other players.

Therefore, SvDs are not just decorative elements in the Sanki game but essential components that add depth and complexity to the gaming experience in Sankiverse. They contribute to the dynamics and strategies of the game, giving players the opportunity to explore different ways to use them and add value to their experience.

How can SvDs be obtained?

In May 2024, we will launch the sale of the 21,000 SvDs. The starting price for these will be \$333, gradually increasing to the final price of \$888.

To reward participants in the presale, every wallet address that contributed 3 BNB and held untouched Sanki tokens will receive an SvD parcel through an airdrop in the central area between numbers 111 and 1111. The specific number will be randomly drawn from this sample, providing a fair chance to all participants. This is a way for us to reward early involvement and support from our community members, giving them the opportunity to become SvD owners in a fair and transparent manner.

Additionally, individuals who maintained a balance of at least 1 million Sanki tokens in their portfolio for a continuous period of at least 3 months before the start of parcel sales will benefit from an 8% discount on the purchase of an SvD.

Sankiverse development

Starting in February, we set out to develop an MVP (Minimal Viable Product) that we intend to showcase in May, coinciding with the first anniversary of Sanki's launch. For this development, we will allocate separate funds from those raised in the presale.

We will announce in the near future a private sale for SvDs at preferential prices. The funds obtained from this private sale will be invested in the development of the MVP, prototyping of metaobjects, development of the augmented reality application, integration of WebGPU technology, design, and algorithmic design of SvDs. Each SvD, although represented by a hexagonal surface, is actually a complex 3D piece in terms of depth design; the design of each SvD will be algorithmically generated.

More details about SvDs and Sankiverse will be presented in the coming period.

10. Sanki® brand

Sanki Vraja® aspires to position itself as a brand of superior quality products and services, targeting the medium-premium segment. This commitment to excellence and distinction will be reflected in every component and initiative of the brand:

- The Sanki merchandise store sanki.ro
- Franchisable businesses: restaurants, pastry shops, cafes.
- eCommerce platform + marketing/marketing affiliate platform
- International platform sankiexpress.com

The Sanki® brand is supported and amplified by:

- The infrastructure of the Sanki Vraja blockchain project
- The crypto community
- The dedicated team"

Other ideas

1. Pseudo-staking implementation
2. YouTube Miniseries: "The Adventures of Sanki Vraja"
3. Multi-chain, variants: MultiversX, Solana, Algorand, Ethereum
4. Affiliate program for new members in the community

Pseudo-Staking implementation

Within the Sanki Vraja project, pseudo-staking represents an innovative user engagement system, different from traditional staking. It allows users to lock a certain amount of Sanki tokens to access exclusive benefits, such as anniversary coins, metaobjects, SvDs, etc.

The system will operate on a "first come, first served" basis, emphasizing the exclusivity and value of rewards. Active participation and ongoing connection to the ecosystem are crucial to take advantage of these opportunities, contributing to the consolidation of the value of the Sanki token and the platform.

Pseudo-staking could positively influence the token's price by temporarily reducing the supply in the market and encouraging long-term community loyalty.

YouTube Miniseries: "The Adventures of Sanki Vraja"

The universe created for the game will be adapted into a pilot series on YouTube, consisting of 8 episodes, each lasting 8 minutes, illustrating the adventures of the character Sanki and other characters from this universe. In these episodes, we will explicitly describe the history, temporal and spatial location, hierarchy, the forces involved, the abilities, and equipment of each character.

If the series captures the audience's interest and becomes popular, we will continue with new episodes that delve deeper into the game's universe, thus covering a wide range of gaming situations, interactions, and confrontations between characters. A significant portion of the revenues generated on YouTube will be used to burn Sanki tokens.

Through this integrated approach, we aim to create a complete and immersive experience for our community, connecting the virtual gaming world with the narrative and visual world of the YouTube series. This will not only enhance the attractiveness and engagement with the Sanki Vraja brand but also contribute to the growth of the value of our ecosystem through interactivity and quality content.

Sustainability, sources of income for long-term project development

8% of the net profit of SANKI VRAJA SRL goes to the development of the project;
20% of the net profit made from the sale of metaobjects goes to the development of the platform.

5% of the burn from gaming parties goes to game dev.

10% of the revenue from YouTube goes to the development of the project.

Sanki® and Sanki Vraja® are independently registered trademarks in Romania through OSIM.

Sanki® is a trademark registered in the European Union through EUIPO.

Initial Description of the Character Sanki Vraja

Sanki Vraja is a mysterious character with a distinctive appearance and an enigmatic aura. Here's a possible description of this character:

Sanki Vraja is tall and slender, with a straight posture and natural elegance. His hair is long and black, reaching down to the middle of his back, and his eyes are intensely green, like shiny emeralds. He has sharp features, with a slightly square jaw and high cheekbones, which give him an air of authority and confidence.

Dressed in a black cloak, Sanki exudes a mysterious and enchanting aura. The cloak seems to move in the wind even when there is no breeze. It is also adorned with golden embroidery, featuring magical symbols and strange motifs, suggesting a connection to the supernatural world.

His face is often shadowed by an enigmatic expression, and his piercing gaze reveals deep wisdom and vast knowledge. Sanki Vraja always wears a necklace with a mystical medallion that emits a soft light and appears to conceal incredible power.

Sanki's personality is calm and introspective, but also firm and determined. He seems to always be one step ahead of others and has a remarkable ability to guide events in the desired direction. Sanki is known as a master of magic and the occult, using his abilities to protect and guide the shadowy world.

Despite his mysterious appearance, Sanki Vraja is equally fascinating and intimidating. People are drawn to his strong energy and hypnotic charisma, but they realize that he is a character with powers and intentions that are not fully understood. He is a protector of the balance between worlds, often called upon to confront dark forces and restore harmony.
